Aster Vale Demonstration Clinic (fictional)

Primary care assessment

Patient: Daniel M. (synthetic) | ID: SYN-001 | DOB: 1978-10-06

Encounter: ENC-001-01 | Source: DOC-001-01 | Type: progress_note

Clinical time: 2026-01-08T09:40:00+03:00

Documented: 2026-01-08T12:45:00+03:00 | Author: Dr Mira Vale (fictional)

SYNTHETIC — NOT FOR CLINICAL USE

Chief concern: Dry cough and intermittent heartburn.

History: Cough present for about ten days, mainly evenings; no fever, hemoptysis or breathlessness. Never smoked. No previous lung disease. No regular medication and no previous ACE inhibitor use reported. Works at a fictional stationery office; no dust exposure reported. No known drug allergies reported.

Examination: Temperature 36.7 C, pulse 76/min, BP 148/92 mmHg, oxygen saturation 98% on air. Chest clear. Weight 82.0 kg.

Assessment: Recent cough with symptomatic reflux; post-viral cough also possible. Elevated office BP requires repeat assessment.

Plan: Four-week omeprazole trial for heartburn; review persistent cough and repeat BP. Return earlier for breathlessness, blood in sputum or systemic symptoms.
