Aster Vale Demonstration Clinic (fictional)

Blood pressure and symptom review

Patient: Daniel M. (synthetic) | ID: SYN-001 | DOB: 1978-10-06

Encounter: ENC-001-02 | Source: DOC-001-02 | Type: progress_note

Clinical time: 2026-02-12T09:40:00+03:00

Documented: 2026-02-12T12:45:00+03:00 | Author: Dr Mira Vale (fictional)

SYNTHETIC — NOT FOR CLINICAL USE

Interval history: Heartburn improved after the four-week course. Dry cough continues intermittently and has not fully settled. No dyspnea at rest, hemoptysis or fever.

Examination: BP 152/94 mmHg after rest, pulse 78/min, oxygen saturation 98% on air. Weight 81.5 kg. Chest clear.

Assessment: Repeated hypertension; cough of uncertain cause.

Plan: Lisinopril 5 mg once daily prescribed, first intended dose tomorrow. Discuss possible cough as an adverse effect. Renal function and potassium sampled today; repeat at next visit. Chest radiograph requested if cough persists. Medication order is not confirmation of ingestion.
