# Aster Vale Demonstration Clinic (fictional)

## Persistent cough review

Patient: Daniel M. (synthetic) | ID: SYN-001 | DOB: 1978-10-06

Encounter: ENC-001-03 | Source: DOC-001-03 | Type: progress_note

Clinical time: 2026-03-19T09:40:00+03:00

Documented: 2026-03-19T12:45:00+03:00 | Author: Dr Mira Vale (fictional)

SYNTHETIC — NOT FOR CLINICAL USE

History: Reports taking lisinopril since February 13. Cough persists, with occasional scant clear sputum. Heartburn remains better. No fever or hemoptysis.

Findings: BP 138/86 mmHg, saturation 97% on air, weight 80.8 kg. Faint right basal crackles, no wheeze.

Assessment: Persistent cough; chest radiograph and blood tests obtained today.

Plan: Review finalized results; radiograph follow-up will be arranged according to report. Renal function monitoring after starting lisinopril. Return for worsening symptoms.
