Aster Vale Demonstration Clinic (fictional)

Follow-up consultation

Patient: Daniel M. (synthetic) | ID: SYN-001 | DOB: 1978-10-06

Encounter: ENC-001-04 | Source: DOC-001-04 | Type: progress_note

Clinical time: 2026-04-30T09:40:00+03:00

Documented: 2026-04-30T12:45:00+03:00 | Author: Dr Mira Vale (fictional)

SYNTHETIC — NOT FOR CLINICAL USE

History: Cough remains daily; has reduced exercise tolerance on stairs. No fever or hemoptysis. Reports regular lisinopril use.

Examination: BP 136/84 mmHg, saturation 97% on air, weight 79.5 kg; right basal crackles remain subtle.

Assessment: Persistent respiratory symptoms. Repeat chest radiograph obtained today.

Plan: Await radiology comparison. Internal medicine review requested. Patient advised to seek urgent review for breathlessness at rest or hemoptysis.
