Aster Vale Demonstration Clinic (fictional)

Internal medicine consultation

Patient: Daniel M. (synthetic) | ID: SYN-001 | DOB: 1978-10-06

Encounter: ENC-001-05 | Source: DOC-001-05 | Type: consultation_note

Clinical time: 2026-06-04T09:40:00+03:00

Documented: 2026-06-04T12:45:00+03:00 | Author: Dr Leon Ash (fictional)

SYNTHETIC — NOT FOR CLINICAL USE

Reason for review: Cough, intermittent reflux and worry about work.

History: Cough first began on May 26, 2026; no cough before then. Taking lisinopril 5 mg daily since February. Reports occasional heartburn and poor sleep when anxious. Denies fever and hemoptysis.

Exam: BP 132/82 mmHg, saturation 97% on air, weight 78.8 kg. No wheeze.

Working impression: ACE inhibitor-associated cough is possible; reflux and anxiety may amplify symptoms. Previous radiology documents are not attached to this consultation packet.

Plan: Short symptom diary, trial reflux treatment for recurrent heartburn, arrange medication review and obtain prior imaging reports. No definitive etiology established.

Prescription MED-001-04: Omeprazole 20 mg orally once daily from June 5 through July 2, ordered today at 09:40 +03:00 for recurrent heartburn.
