Aster Vale Demonstration Clinic (fictional)

Chest radiograph report

Patient: Daniel M. (synthetic) | ID: SYN-001 | DOB: 1978-10-06

Encounter: ENC-001-03 | Source: DOC-001-18 | Type: radiology_report

Clinical time: 2026-03-19T10:00:00+03:00

Documented: 2026-03-19T12:00:00+03:00 | Author: Dr Sera Flint, radiology (fictional)

SYNTHETIC — NOT FOR CLINICAL USE

Exam: PA and lateral chest radiograph.

Indication: Persistent cough.

Technique: Standard two-view study (fictional report).

Comparison: None available. Findings: Small ill-defined right lower-zone air-space opacity. No pleural effusion. Cardiomediastinal silhouette not enlarged. Impression: Nonspecific right basal opacity; inflammatory change or subsegmental atelectatic change are considerations. Repeat chest radiograph in six weeks to assess resolution.

Any attached image is an externally sourced reference radiograph, not an examination of this simulated patient.
