Aster Vale Demonstration Clinic (fictional)

Chest radiograph report

Patient: Daniel M. (synthetic) | ID: SYN-001 | DOB: 1978-10-06

Encounter: ENC-001-04 | Source: DOC-001-19 | Type: radiology_report

Clinical time: 2026-04-30T10:00:00+03:00

Documented: 2026-04-30T12:00:00+03:00 | Author: Dr Sera Flint, radiology (fictional)

SYNTHETIC — NOT FOR CLINICAL USE

Exam: PA and lateral chest radiograph.

Indication: Persistent cough.

Technique: Standard two-view study (fictional report).

Comparison: March 19, 2026. Findings: Right lower-zone opacity persists without convincing interval clearing. No effusion or new diffuse change. Impression: Persistent nonspecific right basal opacity. Respiratory assessment and CT characterization are advised; a specific diagnosis cannot be assigned on this radiograph.

Any attached image is an externally sourced reference radiograph, not an examination of this simulated patient.
